Introduction

Concept and Background

What's all about?

Problem

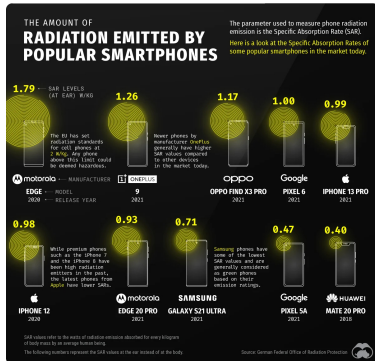

- Mobile phones are great tools, but they are bnned in some places.
- Detecting phones being around is important.
- Providing easy-to-use tools to detect phones.

What's Being Detected ?

Key Point

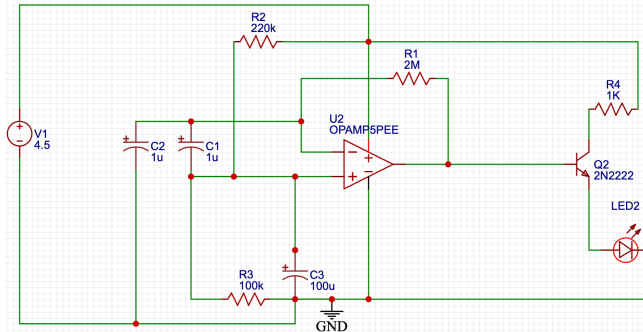

Almost all mobile phones emit EM radiation.

GSM, 2G, Searching for network, or SMS ~ 800 MHz

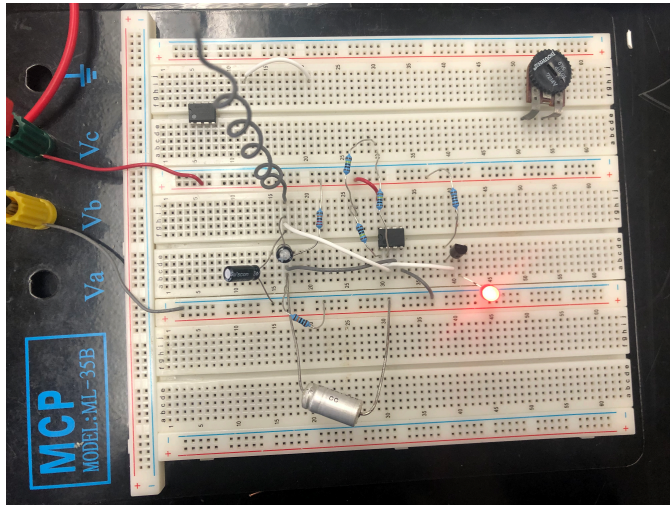

Design & Implementaion

Circuit Diagram

- LM358P Op Amp
- NPN Transistor
- LED & Buzzer
- Capacitors and resistors

In-Lab Testing

A Quick Demo

Limitations

Limitations

- Very small coverage circle.
- Requires antenna, and more tuning for is.
- Radiation-free workplace.
- Such circuits cannot be simulated.

1&2 layers

From **\$2**/Sqps
Build Time: 24 hours

- ✓ Only \$2 for 100x100mm PCBs
- ✓ \$55/sqft for batch production
- ✓ FR4, Aluminum, Lead Free PCB

Quote Now

4&6 Layers

From **\$2**/Sqps
Build Time: 4 days

- ✓ 4 L - \$2 for 50x50mm PCBs
- ✓ 4 L - \$9/sqft for Batch production
- ✓ 6 L - \$20 for 50x50mm PCBs

Conclusion

The mobile phone detector based on an op amp is an effective and low-cost project, to detect the existing of a mobile phone around via EM radiation emitted by the GSM signals.

Thank you for listening!
