Introduction

Concept and Background

What's all about?

Problem

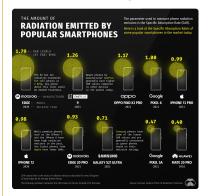

- Mobile phones are great tools, but they are brned in some places.
- Detecting phones being around is important.
- Providing easy-to-use tools to detect phones.

What's Being Detected?

Note

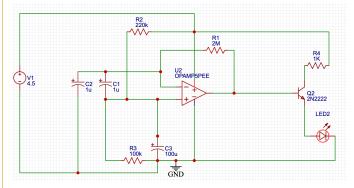

Almost all mobile phones emit EM radiation.

GSM, 2G, Searching for network, or SMS \sim 800 MHz

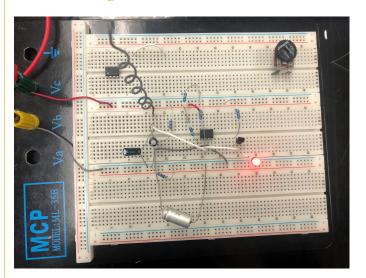

Design & Implementaion

Cicuit Diagram

- LM358P Op Amp
- NPN Transistor
- LED & Buzzer
- Capacitros and resistors

In-Lab Testing

A Quick Demo

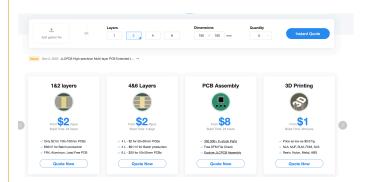

Limitations

Limitations

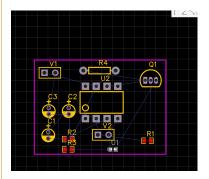

- Very small coverage radius.
- Require antenna, and more tuning for is.
- Radiation-free workplace.
- Such circuits cannot be simulated.

Conclusion

the mobile phone detector based on an op amp is an effective and low-cost project, to delete the existing of a mobile phone around via EM radiation emitted by the GSM signals.

Thank you for listening!
